

Body Awareness & Somatic Check-In

Somatic Therapy — Connecting Mind and Body

Our bodies store emotions and experiences. This worksheet helps you develop interoceptive awareness — the ability to notice and interpret your body's internal signals. Complete this slowly, pausing to actually feel each area.

Date: _____ Before/After: ☐ Before session ☐ After session ☐ Homework

BODY SCAN

Rate tension/activation in each area (0 = totally relaxed, 10 = maximum tension):

Head / Forehead: _____

Jaw / Mouth: _____

Neck: _____

Shoulders: _____

Chest: _____

Upper Back: _____

Stomach / Gut: _____

Lower Back: _____

Hips / Pelvis: _____

Arms / Hands: _____

Legs: _____

Feet: _____

WINDOW OF TOLERANCE

Where are you right now on the nervous system scale?

☐ HYPERAROUSAL (fight/flight)

Anxious, racing heart, restless, hypervigilant, can't sit still

☐ WINDOW OF TOLERANCE

Calm, present, able to think clearly, grounded, regulated

☐ HYPOAROUSAL (freeze/collapse)

Numb, foggy, exhausted, disconnected, shut down, no energy

Somatic Regulation Exercises

Techniques for Returning to Your Window of Tolerance

Orienting

Slowly turn your head and look around the room. Name 5 objects you see. Let your eyes rest on anything that feels calming. Notice how your neck and shoulders feel as you move.

After practicing — how does your body feel?

Grounding Through Feet

Press your feet firmly into the floor. Notice the pressure, temperature, and texture. Slowly shift weight from heel to toe. Feel the support of the ground beneath you.

After practicing — how does your body feel?

Containment

Imagine placing your distress in a container (box, safe, jar). Visualize closing it securely. You can come back to it when you're ready. It's contained, not gone.

After practicing — how does your body feel?

Butterfly Hug

Cross arms over your chest, hands on opposite shoulders. Alternate tapping left and right. Tap slowly for calm, faster for activation. Continue for 1-2 minutes.

After practicing — how does your body feel?

Vagal Toning

Take a deep breath in. On the exhale, hum or make a "voo" sound. Feel the vibration in your chest. Repeat 5-10 times. This stimulates the vagus nerve.

After practicing — how does your body feel?

Pendulation

Notice an area of tension/discomfort in your body. Now find an area that feels neutral or pleasant. Slowly move your attention back and forth between them.
